

# Insertion Loss Testing with the Zmetrix ST808

Now PCB fabricators can measure transmission line insertion loss using the Delta-L test standard with the Zmetrix 20 Ghz. ST808 TDR.

The Zmetrix Insertion Loss Test option for the ST808 uses a high-bandwidth Zmetrix probe and an easy-to-use software module to make insertion loss measurements simple. Add industry-leading ESD resistance, and you have a clear advantage in production test instrumentation.
